Web Platforms

Senior Software Engineer at *YipitData* from 2021 to 2023. Senior with direct responsibility for our analyst facing internal tooling on the Publishing team. Increased the functionality of our automated deliverable pipeline by designing new parameterized queries to support growth rate analysis supporting multiple metrics and time deltas. Redesigning base query templating engine to improve performance (50% final run time compared to previous), and work with PrestoDB based limitations around query string limit and query stage limit. More than doubled the amount of data we could query at once.

Senior Python Engineer at *Zipari* from 2020 to 2021. Worked on product team in member experience. Designed and built the back end apis for multiple new features that allowed viewing new kinds of health care data in the platform. Solved data generation problems for testing environments across service boundaries by leveraging tool design and python packaging expertise.

Software Engineer at *GLG* from 2017 to 2020. Member of various project focused teams. Built an internal quoting tool that increased margins on relevant products by 3% and approximately \$500,000 a year. Improved time tracking application for expert witnesses. Member of a team improving accounting systems.

Python engineer at *Handshake* in 2017. Member of core engineering team. Designed and developed customized validators for **Django**. During a change to our permissioning system was tasked with rebuilding the authorization backend. Built custom filters for a **Tastypie** API.

Platform engineer at *Dog on a Horse* from 2014 to 2016. Managed **AWS** based infrastructure and build JSON application APIs for *Topps* application ecosystem.

Project Management and Architecture

Owner, maintainer, and architect of *Pursued Py Bear* an educational Python game framework started in 2016. v1.1 released in December 2021. Responsible for primary API design, performed via stakeholder interviews over multiple years. Community outreach performed concurrently with meetup organization, by attending interested meetups, and Python conferences where I've spoken on game design and development around the USA. Support roles via the community discord where I answer questions on ppb usage, triage new bugs, and audit common questions for inclusion in the documentation. Lead community discussions on task prioritization so that ppb can meet its goals.

Lead an ad-hoc team at *Dog on a Horse* for a new storefront. Found cross team compromises that would improve application architecture and reduce standing technical debt. Wrote proposal to be sent to client. Worked with the team to deliver ahead of schedule.
